Multi-million power plant near Estevan

REGINA. — David Cass, Regina, general manager of the Saskatchewan Power Corporation, has revealed plans for the construction of a new, multi-million dollar hydro-electric generating plant near Estevan, in southern Saskatchewan, work on which will commence in the near future.

The announcement concerning construction closely follows an announcement made late in 1955, with regard to a similar steel generating station to be constructed at Estevan shortly.

The new plant, to be located south of the town of Estevan, within the limits of the international boundary, is a boon scheduled for completion by 1960. The first 60,000 kilowatts generated will be complete with temporary generation, to permit a further expansion, to come a quarter of a century later.

The new plant will be located south of the town of Estevan, within the limits of the international boundary, is a boon scheduled for completion by 1960. The first 60,000 kilowatts generated will be complete with temporary generation, to permit a further expansion, to come a quarter of a century later.

A wholly owned Canadian subsidiary, without shareholders, the firm, Bunkin and Partners (Canada) Ltd., has been appointed project engineer for the early stage of the project, which is being estimated at \$10 million. This is believed to be the largest contract awarded to a firm from this state since the outbreak of World War II.

The first Canadian contract for the engineering of a thermal power plant awarded to a British company.

Tenders for the supply of construction and other equipment for the new plant will be released by the Regina Corporation in the near future. The first decision to proceed with construction is expected to be made by the International Joint Commission to which the cooling water is to be drawn.

Famed toymaker's nature is best provider

Ray Rogers, famed Danish toymaker, said manufacturers had

been unable to come up with anything to replace what nature provides.

"Actually, the best toys are found in nature, like acorns and acornshells," Rogers said, "and after these ones which are the best."

"The simple toys are the best," he said, "because they are the best."

Rogers, who has been making toys for more than a quarter of a century, said he is particularly fond of the fact that fathers will play with their children the same toys they used as young-

sters. "Almost always, he said, it is the men who come back for the toys of their youth, not the women."

"When it comes to toys," he explained, "little girls become adults after the age of six and little boys remain little boys until they die."

SQUARE HANDS HONORABLE
Louis XVI of France is recognized as the square hand of the world. Because he was the only king who was not at that time, he is called the square hand of the world.

Olli Barley recommended interior B.C.

OTTAWA.—Olli Barley is of the opinion that the recommended variety for the central interior of British Columbia is G. 5. B. Green of the Prince George Experimental Farm, says Barley, who has been in the field for the past 13 years in connection with the production of barley with the necessary characteristics for the interior of the province.

Barley is one of the principal grain crops grown in central British Columbia. Because of the growing season and early fall rains, selecting a suitable variety is a problem. It is often used as a companion crop, when seeding down forage in this area and under conditions of prime importance.

Olli produces very good quality grain and has a great deal of height. It is less susceptible to lodging than most other varieties. It is a good variety for the interior of the province, where it is used for forage and for grain. It is a good variety for the interior of the province, where it is used for forage and for grain.
